

Press Release

My Endpoint Protector, SaaS application for Data Loss Prevention and Device Control launched in France

Data Secure Technology launches My Endpoint Protector in France

Suresnes, France and Cluj-Napoca, Romania, 23. June 2010, Data Secure Technology announces the launch in the French market of My Endpoint Protector, the first Web-based service that enables companies to make full use of portable devices without risking data leakage or malware infections. My Endpoint Protector, developed by CoSoSys and provided by DS Technology, uses a policy-based approach, enabling businesses to manage how data can be used on all endpoints – Desktops, Laptops, Netbooks and more.

My Endpoint Protector makes enterprise-level device control and security accessible to even the smallest organizations without the need for expensive additional equipment or staff. Whether employees work from home, on the road or from remote locations, the security of their Desktops and Laptops can easily be centrally managed through the cloud.

What are the benefits?

- Protection against data loss, data theft, data leakage and malware infection by controlling the use of portable devices
- No acquisition or server installation
- Solution available to businesses of any size (from SME to Large Enterprise)
- Manage one or several hundred PCs from a single, secure Web interface
- Real-time monitoring of devices and data, while the device activity logs provide an audit trail
- You only need an Internet connection to have the software running
- Runs on both Windows and Mac operating systems
- Provided in France through a highly secure data center using the latest technology

My Endpoint Protector by DS Technology is an easy to manage, flexible and scalable security service. The total cost of ownership (TCO) is significantly lower than conventional solutions - no purchase of hardware (servers, firewall, router, etc), no perpetual licensing model or annual maintenance fee.

The wide choice of service packages offered by DS Technology aims to help companies choose the best fitted option to prevent data theft, identity theft and other malware and fraud related risks while saving them time and money, which are subsequently invested into growing their businesses.

About Data Secure Technology

Data Secure Technology is a consulting company dedicated to sensitive data security. Our approach is focused on the DLP (Data Loss Prevention) concept: Identify, monitor and protect data “in use” or “at the endpoint” (e.g. data on USB devices, external drives, MP3 players, laptops, and other highly-mobile devices), “in motion” (any data that is moving through the network to the outside via the Internet) and “at rest” (data that resides in files systems, databases and other storage methods).

On these security aspects, Data Secure Technology addresses a global answer on 3 points: Human: Awareness campaign, users training in the sensitive data security; Technical: Technical solutions integrator (data “in use”, “in motion” and “at rest”); Organizational: Compliance (PCI DSS, SOX, etc.), Identity and Access Management, Strong authentication, Traceability. Find out more at: <http://www.dstechnology.fr>.

About CoSoSys

CoSoSys is specialized in network endpoint security and development of software for portable storage device enhancement. The application portfolio includes functions from password security, data synchronization and network security. CoSoSys distributes its products globally through the world’s leading hardware manufacturers, software Distributors, Resellers and directly to users at <http://www.CoSoSys.com> and <http://www.EndpointProtector.fr>. CoSoSys enjoys a continuously growing installation base of users worldwide. The company has offices in Germany, the United States and Romania.
