Press Release

Secure it Easy™, the first USB Firewall Solution available for Windows Vista

Secure it Easy helps PC administrators keep data safe from unauthorized use of portable USB storage devices

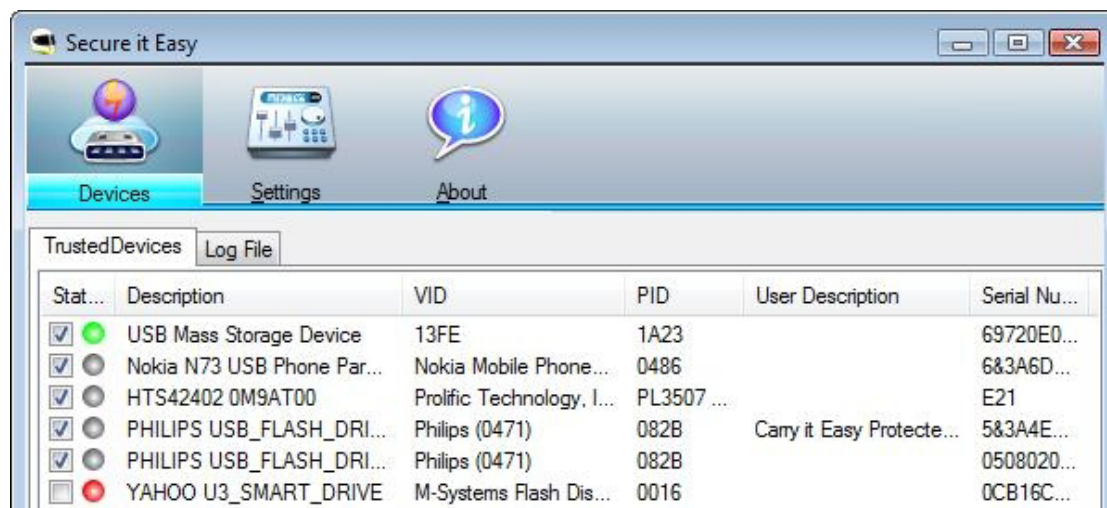

21. February 2007, The software company **CoSoSys** announces the release of the **Secure it Easy** endpoint security software for Windows Vista.

According to recent research, most security breaches do not originate from external hackers, viruses or worms, but from employees who commit more than 70% of unauthorized access to information systems.

Most PC users are still not aware of the risks posed by USB Flash Drives, digital cameras or portable music devices and therefore have not taken any precautions to secure their PCs.

Any portable storage device poses a threat to notebooks, desktop PCs and networks. A disgruntled employee that is tempted to smuggle company data out of the office or somebody that involuntarily carries virus-infected files to the office, can now be stopped.

To guard a PC from such risk Secure it Easy acts as a protective layer between the protected PC and the portable storage device. Only devices that have been authorized by the PC's administrator can be used to transfer data to and from the PC. Such a device is classified as a "TrustedDevice". All other devices are automatically blocked from reading or writing data.

www.cososys.com

As an additional feature, the administrator can receive notification e-mails when unauthorized devices have been connected to PCs somewhere within his infrastructure. This helps find intruders and possible security breaches.

Optionally, the data stored on the portable storage devices can be protected with **Carry it Easy +Plus** software, which resides on the portable device itself. This secures your data with 128 bit AES encryption. In case of lost or stolen devices, your data remains secure.

Secure it Easy is compatible with Windows Vista, Windows XP and Windows 2000. The application user interface is available in English, German and French.

A Secure it Easy license is available for US\$ 44.95 per installation. Volume licenses for companies are available. The application is available for download as 30-day trial version at www.cososys.com.

With the release of Secure it Easy, CoSoSys expands its product portfolio of software for the safe and convenient use of portable storage devices.

About CoSoSys

CoSoSys is specialized in developing and distributing software for portable storage device enhancement and PC endpoint security solutions. The application portfolio includes functions like password security, data synchronization and intrusion prevention. CoSoSys products include the award winning Carry it Easy +Plus software. The company distributes its products globally through world's leading hardware manufacturers, and directly to consumers at www.cososys.com. CoSoSys enjoys a continuously growing installation base of users worldwide.
